## Project Challenge

Reedy Creek Improvement District was not satisfied with its current multi-garage parking guidance system. The system's lack of accuracy, reporting, functionality and service moved Reedy Creek to seek a new solution after just 2.5 years with their current system—it was that bad. Naturally they were apprehensive about introducing a replacement.

Leaning heavily on our 30 years of parking system “problem solving” experience, Parking Guidance Systems presented a more reliable, technologically advanced INDECT solution and won their confidence and the job.

PGS removed the current system and installed one proven to be the gold standard for delivering an experience that is positive for Reedy Creek drivers and profitable for the district.

## System Features

- Number of sensors: UMS - 7,026
- 1 Monument Sign at each garage (3 Total Garages)
- Custom created ECO Internal Signs. INDECT created these special signs for the Theme Park to fit custom static sign enclosures that were previously made to fit our competitor's signs. Upon the removal of their technology, we replaced the competitors electronic signs with ours.
